Testing Changes

On Windows, use the following command to launch a test version of the site locally on your computer.

```
python -m mkdocs serve
```

You should see a prompt that shows the loopback address of your computer and the port number of the test website:

```
INFO    -  Building documentation...
INFO    -  Cleaning site directory
INFO    -  Documentation built in 0.41 seconds
INFO    -  [12:02:47] Watching paths for changes: 'docs', 'mkdocs.yml'
INFO    -  [12:02:47] Serving on http://127.0.0.1:8000/
```

Copy and paste the following address into your web browser to view the test site:

```
http://127.0.0.1:8000/
```

You should see something like:

![[KB Figure 1.png]]

NOTE: The content inside the index.md file is what will be presented after the default installation.
